TITLE: RETRIEVING/DISPLAYING DEVICE FOR ERROR
MESSAGE

PUBN-DATE: October 16, 1990

INVENTOR-INFORMATION:

NAME
MIYAI, HITOSHI

ASSIGNEE-INFORMATION:

NAME	COUNTRY
NEC CORP	N/A

APPL-NO: JP01014761

APPL-DATE: January 24, 1989

INT-CL (IPC): G06F011/32, G06F015/20

ABSTRACT:

PURPOSE: To obtain the detailed explanation of an error in reply to a request by retrieving and displaying an error message of the hierarchy corresponding to the due request frequency out of those hierarchical.

error
messages.

CONSTITUTION: When a detailed error message request signal 1001 is inputted, a request signal counting device 320 counts the input frequency of the signal 1001 and outputs the counting result to an error message storing device as the level information 3201. When the signal 1001 is inputted after output of the error message identification information 3001, 1 is added to the value of the device 320. This added value is turned into the information 3201, and a more detailed error message request is produced among those error messages instructed by the same error message identification information. If the signal 1001 is inputted by (m) times with the information 3001 kept to '2', the information 3201 has the value of (m) and a level-m message of an error message 2 is retrieved.
